

This document is a sample for testing a LangChain-based PDF summarization system.

LangChain allows developers to build powerful LLM applications quickly. This includes document summarization, question answering from documents, and chatbot applications.

In this project, you can upload a PDF file and choose between a simple or detailed summary. You can also ask questions about the contents of the PDF.

Technologies used:

- Python
- Flask
- LangChain
- OpenAI GPT-4o
- FAISS
- PyPDF

If this file is processed correctly, your document AI system is working as expected.
